Be part of something GREAT

Graduate Opportunities
Belgium - China - Czech Republic – Germany – Hungary – India – Italy – Mexico – Poland –
Japan – Sweden – Switzerland – United Kingdom - USA

Do you want to be part of engineering solutions that the world’s biggest businesses rely on?
Then join IMI, a FTSE 250 specialist engineering company. Spend two years rotating
between roles in one of our key divisions, including an international placement. Work on
exciting, live projects. See the product lifecycle from end-to-end. And gain all the experience
and exposure you need for a long-term engineering career.

Choose your programme

- **Precision Engineering**
  Building a career within our Precision Engineering division, you'll undertake
  placements in Engineering, Commercial, Operations and Project Management. The
  focus here is on producing flow control technologies for applications where precision,
  speed and reliability are essential.

- **Critical Engineering**
  This is a chance to be part of producing large-scale flow control solutions with a
  world-leading provider to the energy industry. Your placements will cover Project
  Engineering, Application Engineering, New Product Development and Project
  Management.

- **Hydronic Engineering**
  Innovation is part of everyday life for our Hydronic Engineering teams as they
  engineer high performing, quality products that optimise the efficiency of heating and
  cooling systems. You'll gain wide exposure to this work, as you rotate through
  placements in Operations, Project Management, Commercial and Engineering.

What you need
Our programmes are highly international in nature. So it’s essential that you have the right to
work in the country you're applying for and are fluent in the local language. You must also be
willing and able to relocate frequently, as at least one of your placements will be abroad.

Your background needs to be in mechanical, fluid dynamic, manufacturing or industrial
engineering. For the Critical programme, we’ll also consider chemical engineers. For the
Precision and Hydronic programmes, we’ll also consider mechatronic and electrical
engineers. You must have a bachelor’s or master’s degree (or equivalent) in your discipline.

Key qualities we’re looking for include:
- Fresh, innovative mindset
- Openness to new and varied experiences
- Ability to drive your development and take ownership of your career
- Excellent written and spoken English
What we offer
On top of a competitive salary and benefits package, you’ll get the chance to take on early responsibility, develop a high level of technical skill, and gain experience in a variety of functions before choosing the career path that’s right for you.

Throughout the programme, you’ll receive coaching and support from a dedicated mentor, and our graduate development team will be on hand to offer you career guidance and relocation advice. You will also work with your placement manager and local HR team to ensure you hit the ground running in every new placement.

More about IMI
Employing around 11,000 people in over 50 countries around the world, we create solutions that control the precise movement of fluids in everything from oil rigs to coffee machines. We believe in engineering GREAT, which means taking what’s good and transforming it into something brilliant, life-changing, long-lasting and world-class.
